

EncryptMyFile

User Manual

Installation

Start by inserting the cd into your computer, it should autorun and display the following screen.

If it does not then go to Start->My computer->CD rom drive-> and double click on autorun.exe

Installing to USB

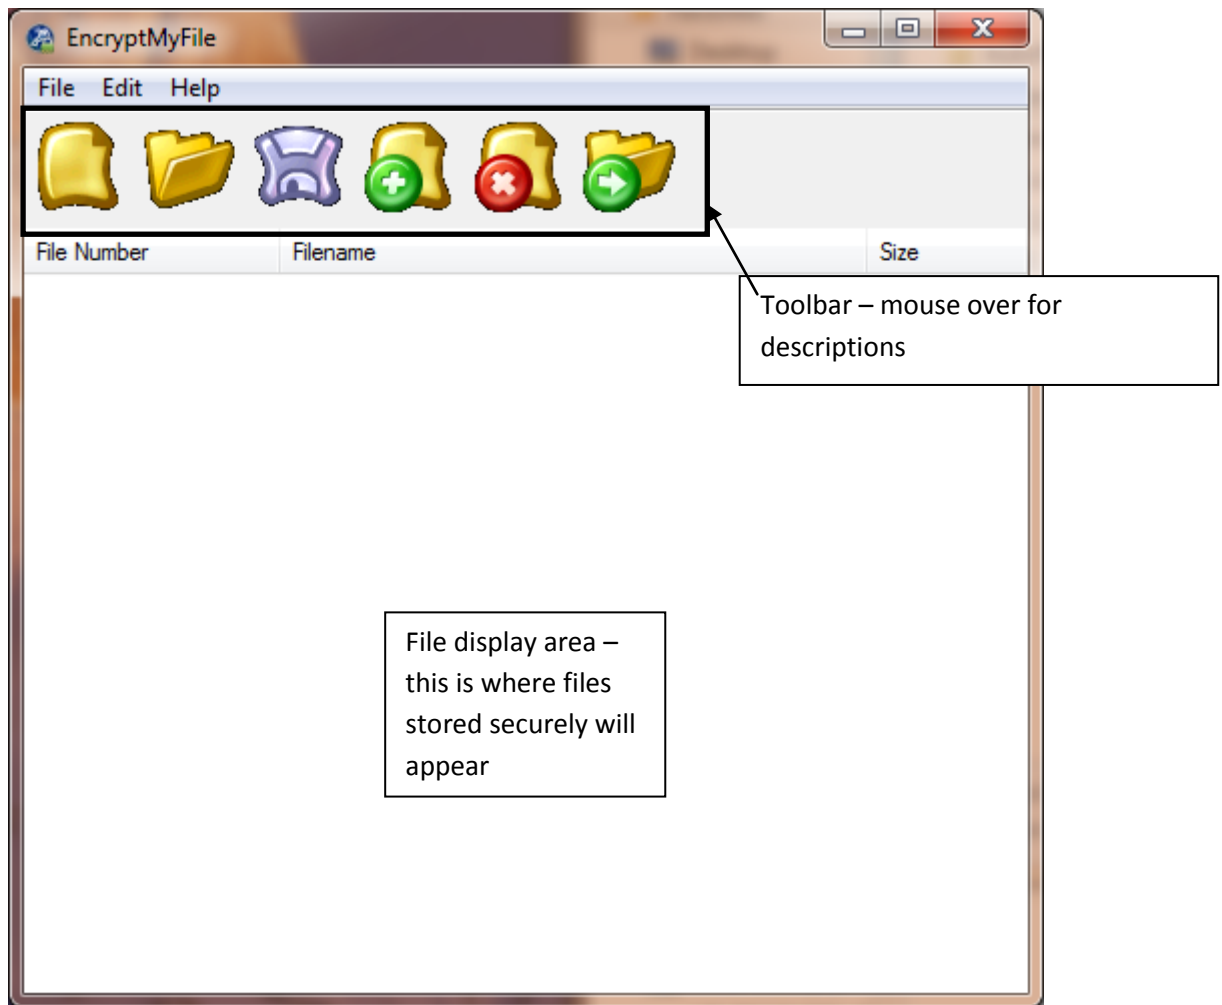

To install the software to your usb device such as a usb flash drive simply select Install to usb and select your usb drive.

Installing to your Hard drive

To install to your Hard Drive select install and then follow the installation wizard's instructions.

Getting Started

User interface

Creating a Safe

You will need to create a new safe to start storing your files, to do this you will need to simply select new safe from the file menu. Then give your safe a name and set a password.

Opening a safe

To open your safe select open safe from the file menu then select your safe and then enter your password.

Adding a File

Adding a file to your safe is as simple as dragging the file(s) into the EncryptMyFile window and the files will be added.

Extracting a file

To extract a file from the safe select a file and press the extract button  You can select multiples files by holding down the control (ctrl) button and then clicking on the files you want to extract.

Closing the Safe

Your safe is securely closed every time you close the application.

CAUTION: when accessing a safe on a flash drive or other removable media, you must close your safe before removing the drive, failing to do so may result in data loss.
